A: Take a look at this example : Imports System.IO Public Class myConsole Shared Sub Main(args() As String) 'Declare an input stream and output stream for the console. Dim input As New IO.StreamReader(Console.OpenStandardInput()) Dim output As New IO.StreamWriter(Console.OpenStandardOutput()) 'Display a simple message. output.WriteLine("My message.") Console.ReadLine() End Sub End Class A: For a more general purpose solution, you could look at using WMI. This approach uses the old Win32 API, but the WMI is still around. You could even use the .NET API, but the WMI is more often used. Welcome to the Lab! Come in to the lab for coffee, lunch, and one-on-one training with me. The office is for consultations. Reverse Engineered: Create An XML Descriptor From An Emulated.NET Assembly ... Your Own Custom Emulated Types - They Are Safe As Long As You Understand What They Are Doing ... Binary Blocks CSharp Generator Homepage: Blocks Editorial Review the first time I came across this package it was different and I was like wow this looks like a really cool idea. i think I might just download it and give it a try. then i installed it and i was like this is a waste of time and a big waste of time. I don't care much about those scenarios but i think most people would want some sort of parser for source files to help them translate code they wrote into the correct XML blocks. i don't think that's the way it should be done. a parser should help you write code in the first place and not in the other way around. Feedback Lovers Wow I wanted to purchase this today but didn't have enough time. Now I do. I'm going to give it a try. I'm definitely going to purchase this if it works. Keep up the good work. I wanted to try your product for a while. I really like it. It's very easy to write a file from the code in the program. It feels like I'm writing XML, but without all the error checking, that's all in the background. But it's still possible to read the file back into the editor and see what I did. I think it's a perfect tool to convert data in formats that might not be ideal for XML into XML format. this is the first time I saw an engine that was designed to turn an entire assembler to an XML file. I'm definitely going to give it a try. I know that the author and developers can get back to you whenever you have problems, but do you see that being a problem? I mean is it a solution or not? Binary Blocks CSharp Generator is a stand alone application that is used to create a binary blocks file of your CSharp data. Binary Blocks CSharp Generator takes in a collection of your data and through templating, generates a canonical format that is completely backward compatible for use in any platform that is C#. Binary Blocks CSharp Generator has the potential to become a defacto standard in how data is modeled and stored. It is completely compatible with Binary Serialization which has the potential to become a defacto standard in how data is persisted. Binary Blocks CSharp Generator also has the capability to serialize between Binary Block files and from Binary Block files to other networked nodes using a Transactional Datastore such as Windows Communication Foundation (WCF) or Microsoft Azure. Binary Blocks CSharp Generator is a cross platform application and uses Visual Studio 2013 for compilation. You can model and modify your C# classes while simultaneously generate your binary blocks. A snippet of code follows below. Please review the context of the code to fully understand how it works.

```
BinaryBlocks new BinaryBlocks(SerializerSettings settings) { BinarySerializer serializer = new BinarySerializer();
BinaryBlockSerializer serializerBlock = new BinaryBlockSerializer(); DataContractSerie dataContractSerie = new
DataContractSerie(settings); DataMemberDataContractSerie dataMemberDataContractSerie = new
DataMemberDataContractSerie(); //Create all the entities using the entity-mapper foreach (Product entity in entities) {
entity.EntityMapper.Entity = new Entity(); //map all the properties foreach (Property property in entity.Properties) {
SerializerInfo serializerInfo = property.GetType().GetSerializerInfo(property.PropertyType); if (serializerInfo.IsUniform) {
//Map uniform properties by handle as serializers
