## Gakken Ex 150 Pdf 16

150. Phase interval (degrees) 3. Calculation scheme of SCOLL binary phase shifters using capacitive reactances. The full period of the phase shifter is equal to: (2.1.26)  $T = (2.1.27)$  where  $\omega$  is the angular frequency of the phase shift of two signals; - time constant; - the angle between the signals. It can be seen from the relations obtained that in order to obtain a phase shift from  $90^\circ$  to  $0^\circ$ , it is necessary to change the time constant by one, and for a phase shift from  $0^\circ$  to  $180^\circ$ , by two units. When using capacitive reactances as phase shifters (see fig.
