See also For further details of font styles, refer to the manual at . # Chapter 10. Layers and Families # Introduction This chapter contains the detailed description of how to use the Layers and Families tool. This tool is a major part of the UML. It is used to create and manage complex components and it is one of the most powerful tools provided by the Autodesk UML. The Layers and Families tool helps you create custom shapes, arrows, and many other useful shapes. You can also create your own families from scratch. In this chapter, you will learn how to: * Create layers * Create a family * Create a closed shape * Add decorations to a shape * Change the order of an object's components * Move objects into a family * Flip a single object # Creating layers The Layers and Families tool allows you to create layers to be applied to other shapes. Layers contain the following information about the shape: * Rotation angle * Transparency * Color * Linetypes A layer is simply a collection of all the information about the shape on a specific layer. The group of information about the shape will appear in layers, and it helps to know what is going on in each layer of information. To open the Layers and Families tool, select View ► Layers and Families. A window pops up with the Layers and Families tool (Figure 10-1). Click on the Add Layer icon. The Layers and Families tool has an Add Layer

What's New In AutoCAD?

Support for the new AutoCAD 2020, AutoCAD LT 2020 and AutoCAD LT 2019 product SKUs, as well as extensions for the new functionality, has been added to the AutoCAD installation. A new command-line option -cadme.maximization - has been added to the CadMeExtract program, so you can automate the adding of unique identifiers and edit entities as required for import into AutoCAD (video: 1:15 min.). You can now use the horizontal bevel command with a different type of display than the default ribbon bevel. The Edit Database tool has been enhanced to work with the new CADME format, such as supporting tags in the file and managing CADME-enabled drawings with multiple tags. The Quick Layout option in the Quick View toolbar has been enhanced to work better with CADME files, with the option to set the current document and key values to match the values in the CADME file. Assist: A new Simplify command has been added to the toolbox (File → Commands → Edit → Simplify). You can now customize the input values and apply the command to different entities. Lines have been improved in the new dimensional enhancements, so the command can snap to alignments. Simplify and Trim with Bevel: Simplify with bevel is the same as Simplify but with the added functionality of bevel lines as well as control over how the lines are smoothed. A new automatic simplification process has been added to the Drawing Open dialog. A similar automatic simplification process has been added to the Extension Manager and Extended Viewer. A new type of simplify has been added to the command-line tool - Simplify with Bevel. You can now specify the type of bevel you want to use and also specify the length of the bevel. You can now add labels to a face and add an orthogonal bevel to a face. You can now add a panel to a block and view it as a stand-alone entity with the new panel and block view commands. You can now add annotations on entities with the TIP ([ANN]) command. A new Quick Layout option is available to the toolbox (View → Layout → Quick Layout). You can choose to set the current document, draw instance
